## DETAILED ACTION

### **ART REJECTION:**

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. **Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Morrone et al(6,778,086).**

-- In considering **claims 1-3**, the claimed subject matter that is met by Morrone et al(Morrone) includes:

1) the at member adapted to slide along at least one body wall is met by the window adapted to slide within the frame(see: figure 3);

2) the means for determining sliding member movement, motion detector is met by the compression column staff(12);

3) the controller for determining sliding member movement is met by the electric switching means(16, column 6, lines 44-51).

4) the input being a current input is met since the means(16) is electrical, and therefore would have required some form of current in order to operate.

#### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2632

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**4. Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morrone et al(6,778,086).**

-- With regards to **claims 5-6**, use of sliding members configured as rack and pinion rotatable shaft is well known, and therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate these means into the system Morrone and couple them to the motion detector, since one of ordinary skill would have recognized the most advantageous means of allowing window movement.

***Allowable Subject Matter***

5. Claims 4 and 7-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claims 9-11 are allowed.

***Conclusion***

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to POPE C. DARYL whose telephone number is 571-272-2959. The examiner can normally be reached on M-TH 9:00-7:30.
